

KAGO_framework.model.abitur.netz.
Server.close

KAGO_framework.model.abitur.netz.
Server.closeConnection

KAGO_framework.model.abitur.netz.
Server.processClosingConnection

```
graph LR; A[KAGO_framework.model.abitur.netz.  
Server.close] --> C[KAGO_framework.model.abitur.netz.  
Server.processClosingConnection]; B[KAGO_framework.model.abitur.netz.  
Server.closeConnection] --> C;
```

The diagram illustrates a method delegation or inheritance relationship. On the left, two white rectangular boxes represent source methods: 'KAGO_framework.model.abitur.netz.Server.close' (top) and 'KAGO_framework.model.abitur.netz.Server.closeConnection' (bottom). On the right, a gray rectangular box represents the target method: 'KAGO_framework.model.abitur.netz.Server.processClosingConnection'. Two blue arrows point from the right side of each source box to the left side of the target box, indicating that both source methods delegate or inherit the functionality of the target method.
